

**6.2 Law of Sines**

Name \_\_\_\_\_

Solve each triangle for the indicated side to the nearest tenth.

- 1.
- $m\angle A = 41^\circ$
- ,
- $m\angle B = 57^\circ$
- ,
- $c = 52$
- ; find
- $b$

$$b = 44$$

$$\frac{\sin 57^\circ}{b} = \frac{\sin 82^\circ}{52}$$

$$\frac{52 \sin 57^\circ}{\sin 82^\circ} = \frac{b \sin 82^\circ}{\sin 112^\circ}$$

- 2.
- $m\angle A = 35^\circ$
- ,
- $m\angle B = 56^\circ$
- ,
- $a = 51$
- ; find
- $c$

$$c = 88.9$$

$$\frac{\sin 89^\circ}{c} = \frac{\sin 35^\circ}{51}$$

$$\frac{51 \sin 89^\circ}{\sin 35^\circ} = \frac{c \sin 35^\circ}{\sin 35^\circ}$$

Solve each triangle PQR. Give angles to the nearest degree and sides to the nearest tenth.

- 3.
- $p = 24$
- ,
- $m\angle Q = 51^\circ$
- ,
- $m\angle R = 38^\circ$

$$q = 18.7$$

$$r = 14.8$$

$$m\angle P = 91^\circ$$

$$\frac{\sin 51^\circ}{q} = \frac{\sin 91^\circ}{24}$$

$$\frac{\sin 38^\circ}{r} = \frac{\sin 91^\circ}{24}$$

- 4.
- $q = 48$
- ,
- $m\angle P = 63^\circ$
- ,
- $m\angle R = 51^\circ$

$$r = 40.8$$

$$p = 46.8$$

$$m\angle Q = 66^\circ$$

$$\frac{\sin 51^\circ}{r} = \frac{\sin 66^\circ}{48}$$

$$\frac{\sin 63^\circ}{p} = \frac{\sin 66^\circ}{48}$$

- 5.
- $q = 75$
- ,
- $m\angle P = 42^\circ$
- ,
- $m\angle R = 20^\circ$

$$p = 56.8$$

$$r = 29.1$$

$$m\angle Q = 118^\circ$$

$$\frac{\sin 42^\circ}{p} = \frac{\sin 118^\circ}{75}$$

$$\frac{\sin 20^\circ}{r} = \frac{\sin 118^\circ}{75}$$

Solve the following word problem. Give sides to the nearest tenth.

6. From two points P and Q that are 140 ft apart, the lines of sight to a flagpole across a river make angles of
- $79^\circ$
- and
- $58^\circ$
- respectively, with the line joining P and Q. What are the distances from P and Q to the flagpole?

$$m\angle F = 180 - 58 - 79$$

$$q: \frac{\sin 58^\circ}{q} = \frac{\sin 43^\circ}{140}$$

$$\frac{140 \sin 58^\circ}{\sin 43^\circ} = \frac{q \sin 43^\circ}{\sin 43^\circ}$$

$$q = 174 \text{ ft}$$

$$p: \frac{\sin 79^\circ}{p} = \frac{\sin 43^\circ}{140}$$

$$p = 201.5 \text{ ft}$$
