### 7.1 Amplitude and Period Notes

EQ: What is the effect of changing the amplitude and period of a sinusoidal function?
Sine Parent

Function

| Cycle <br> Period <br> Cosine Parent <br> Function | Section of a periodic graph before it repeats <br> number of degrees or radians for the graph to complete one cycle |
| :--- | :--- |
| Sinusoidal Axis <br> Amplitude <br> Critical Points <br> vertical middle of the graph <br> distance from the sinusoidal axis to highest or lowest point <br> period $/ 4$ |  |
| 1. $y=4 \sin \theta$ | 2. $y=\cos 3 \theta$ |

Ex. Graph 2 cycles $\left\{\begin{array}{l}\text { 1. } y=4 \sin \theta \\ \\ \text { 3. } y=8 \sin \frac{1}{2} x\end{array}\right.$
