$\qquad$

1. Find the perimeter and area of an equilateral triangle with sides of length 10 inches.
2. A ship leaves a port traveling due north. After 5 miles, the ship turns $20^{\circ}$ east of north and travels 9 more miles. At this point, how far is the ship from the port?

3. In triangle $X Y Z, X Y=5 \mathrm{~mm}, Y Z=8 \mathrm{~mm}$, and $m<Y=56^{\circ}$. Find the length of $X Z$ to the nearest tenth of a millimeter.
4. Match the six trigonometric parent functions with their graph. $(\cos x, \sin x, \csc x, \sec x, \tan x, \cot x)$

$\qquad$
5. A trigonometric function is shown below.

$$
f(x)=5 \cos x+2
$$

Which key feature(s) are true for the function?
I. The graph has reflectional symmetry over the $x$-axis
II. The domain of the graph is all real numbers and the range is [-3,7]
III. The function has zeros at $k \pi$, where $k$ is an odd integer.
6. A trigonometric function is shown below.

$$
f(x)=7 \sin \left(x+\frac{\pi}{6}\right)-4
$$

List the transformations

- Amplitude:
- Phase shift:
- Vertical shift:
- Period:

7. An ice cream truck that plays loud music is circling Chuby's neighborhood. $C(t)$ models the volume of the music (in dB ) that Chuby hears, t minutes after the truck arrives in his neighborhood.

$$
C(t)=-15 \cos \left(\frac{2 \pi}{15} t\right)+65
$$

What is the period of this function?
8. The graph of a sinusoidal function is shown.

Write a sine function and a cosine function to represent the graph.
$\qquad$
9. The terminal side of an angle is modeled in the diagram below. Which angle rotation(s) could be represented by the terminal side in the diagram?

l. $45^{\circ}$
II. $\frac{3 \pi}{4}$
III. $135^{\circ}$
IV. $-\frac{5 \pi}{4}$
10. A trigonometric expression is shown below.

$$
\frac{\sin ^{2} \theta-1}{\cos \theta}
$$

Which expression represents the given trigonometric expression in simplified form?
A. $\cos \theta$
B. $-\cos \theta$
C. $-\cos ^{2} \theta$
D. $\tan \theta$
11. A trigonometric equation is shown below.

$$
4 \sin \theta+\frac{3 \sqrt{3}}{2}=\sin \theta, \text { where } 0<\theta<2 \pi
$$

What is the solution to the trigonometric equation over the given interval?
12. The average depth of water at the end of a dock is 6 feet. This varies 2 feet in both directions with the tide. Suppose there is a high tide at 4 AM . If the tide goes from low to high every 6 hours, write a cosine function $\mathrm{d}(\mathrm{t})$ describing the depth of the water as a function of time with $t=4$ corresponding to 4 AM .
