

## 7.4 Linear Functions Day 2

Name \_\_\_\_\_

Write an equation for the perpendicular bisector of the line segment determined by each pair of points.

$$x_1, y_1 \quad x_2, y_2$$

1.  $(3, -5); (-6, 10)$

$$m = \frac{10+5}{-6-3} = \frac{15}{-9} = -\frac{5}{3} \quad \perp m = \frac{3}{5}$$

Midpoint  $\left( \frac{3+(-6)}{2}, \frac{-5+10}{2} \right)$   
 $(-\frac{3}{2}, \frac{5}{2})$

Equation  $y - \frac{5}{2} = \frac{3}{5}(x - (-\frac{3}{2}))$   
 $y = \frac{3}{5}x + \frac{17}{5}$

Write an equation of the line that is determined by the given conditions.

3. Contains the point  $(4, -1)$  and is perpendicular to the line  $2x - y = 4$ .

$2x - y = 4$        $x_1, y_1$   
 $-2x$   
 $-y = -2x + 4$   
 $\frac{-y}{-1} = \frac{-2x+4}{-1}$   
 $y = 2x - 4 \quad \perp m = \frac{1}{2}$

4. Contains the point  $(-2, 4)$  and is parallel to the line  $x - 4y = 8$ .

$$y = \frac{1}{4}x + \frac{9}{2}$$

5. Contains the point  $(-2, 0)$  and is parallel to the line  $x = 4$ .

$$x = -2$$

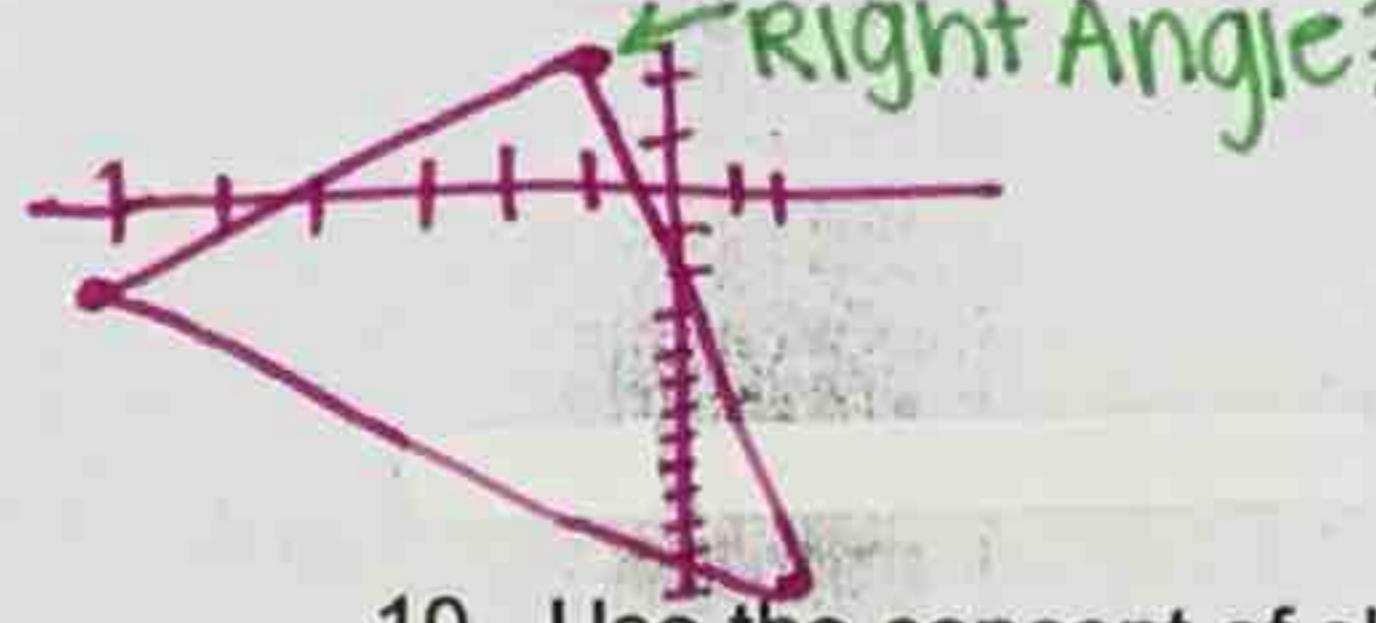

6. Contains the point  $(0, 2)$  and is perpendicular to the line  $y = 8$ .

$$x = 0$$

2.  $(-1, 3); (5, -3)$

$$y = x - 2$$

7. Show that the triangle with vertices  $(-1, 2)$ ,  $(-6, -2)$ , and  $(2, -12)$  is a right triangle.

$$m = \frac{4}{5}$$

$$m = -\frac{5}{4}$$

slopes are  
perpendicular  
right angle

10. Use the concept of slope to determine whether the three points  $A(-1, 2)$ ,  $B(2, 4)$ , and  $C(6, 9)$  are collinear, that is, whether they all lie on the same line. SAME SLOPE BETWEEN ALL 3 POINT

$$m_{AB} = \frac{2}{3} \quad m_{BC} = \frac{2}{4} \quad m_{AC} = 1$$

NO

For #11-13, use the following information:

A house was purchased 8 years ago for \$42,000. This year it was appraised at \$67,500. Assume that the value  $V$  of the house changes linearly with time ( $t$ ).

11. Find a linear equation that models this problem situation.

$$(0, 42,000) \text{ and } (8, 67,500)$$

$$V = 3187.5t + 42000$$

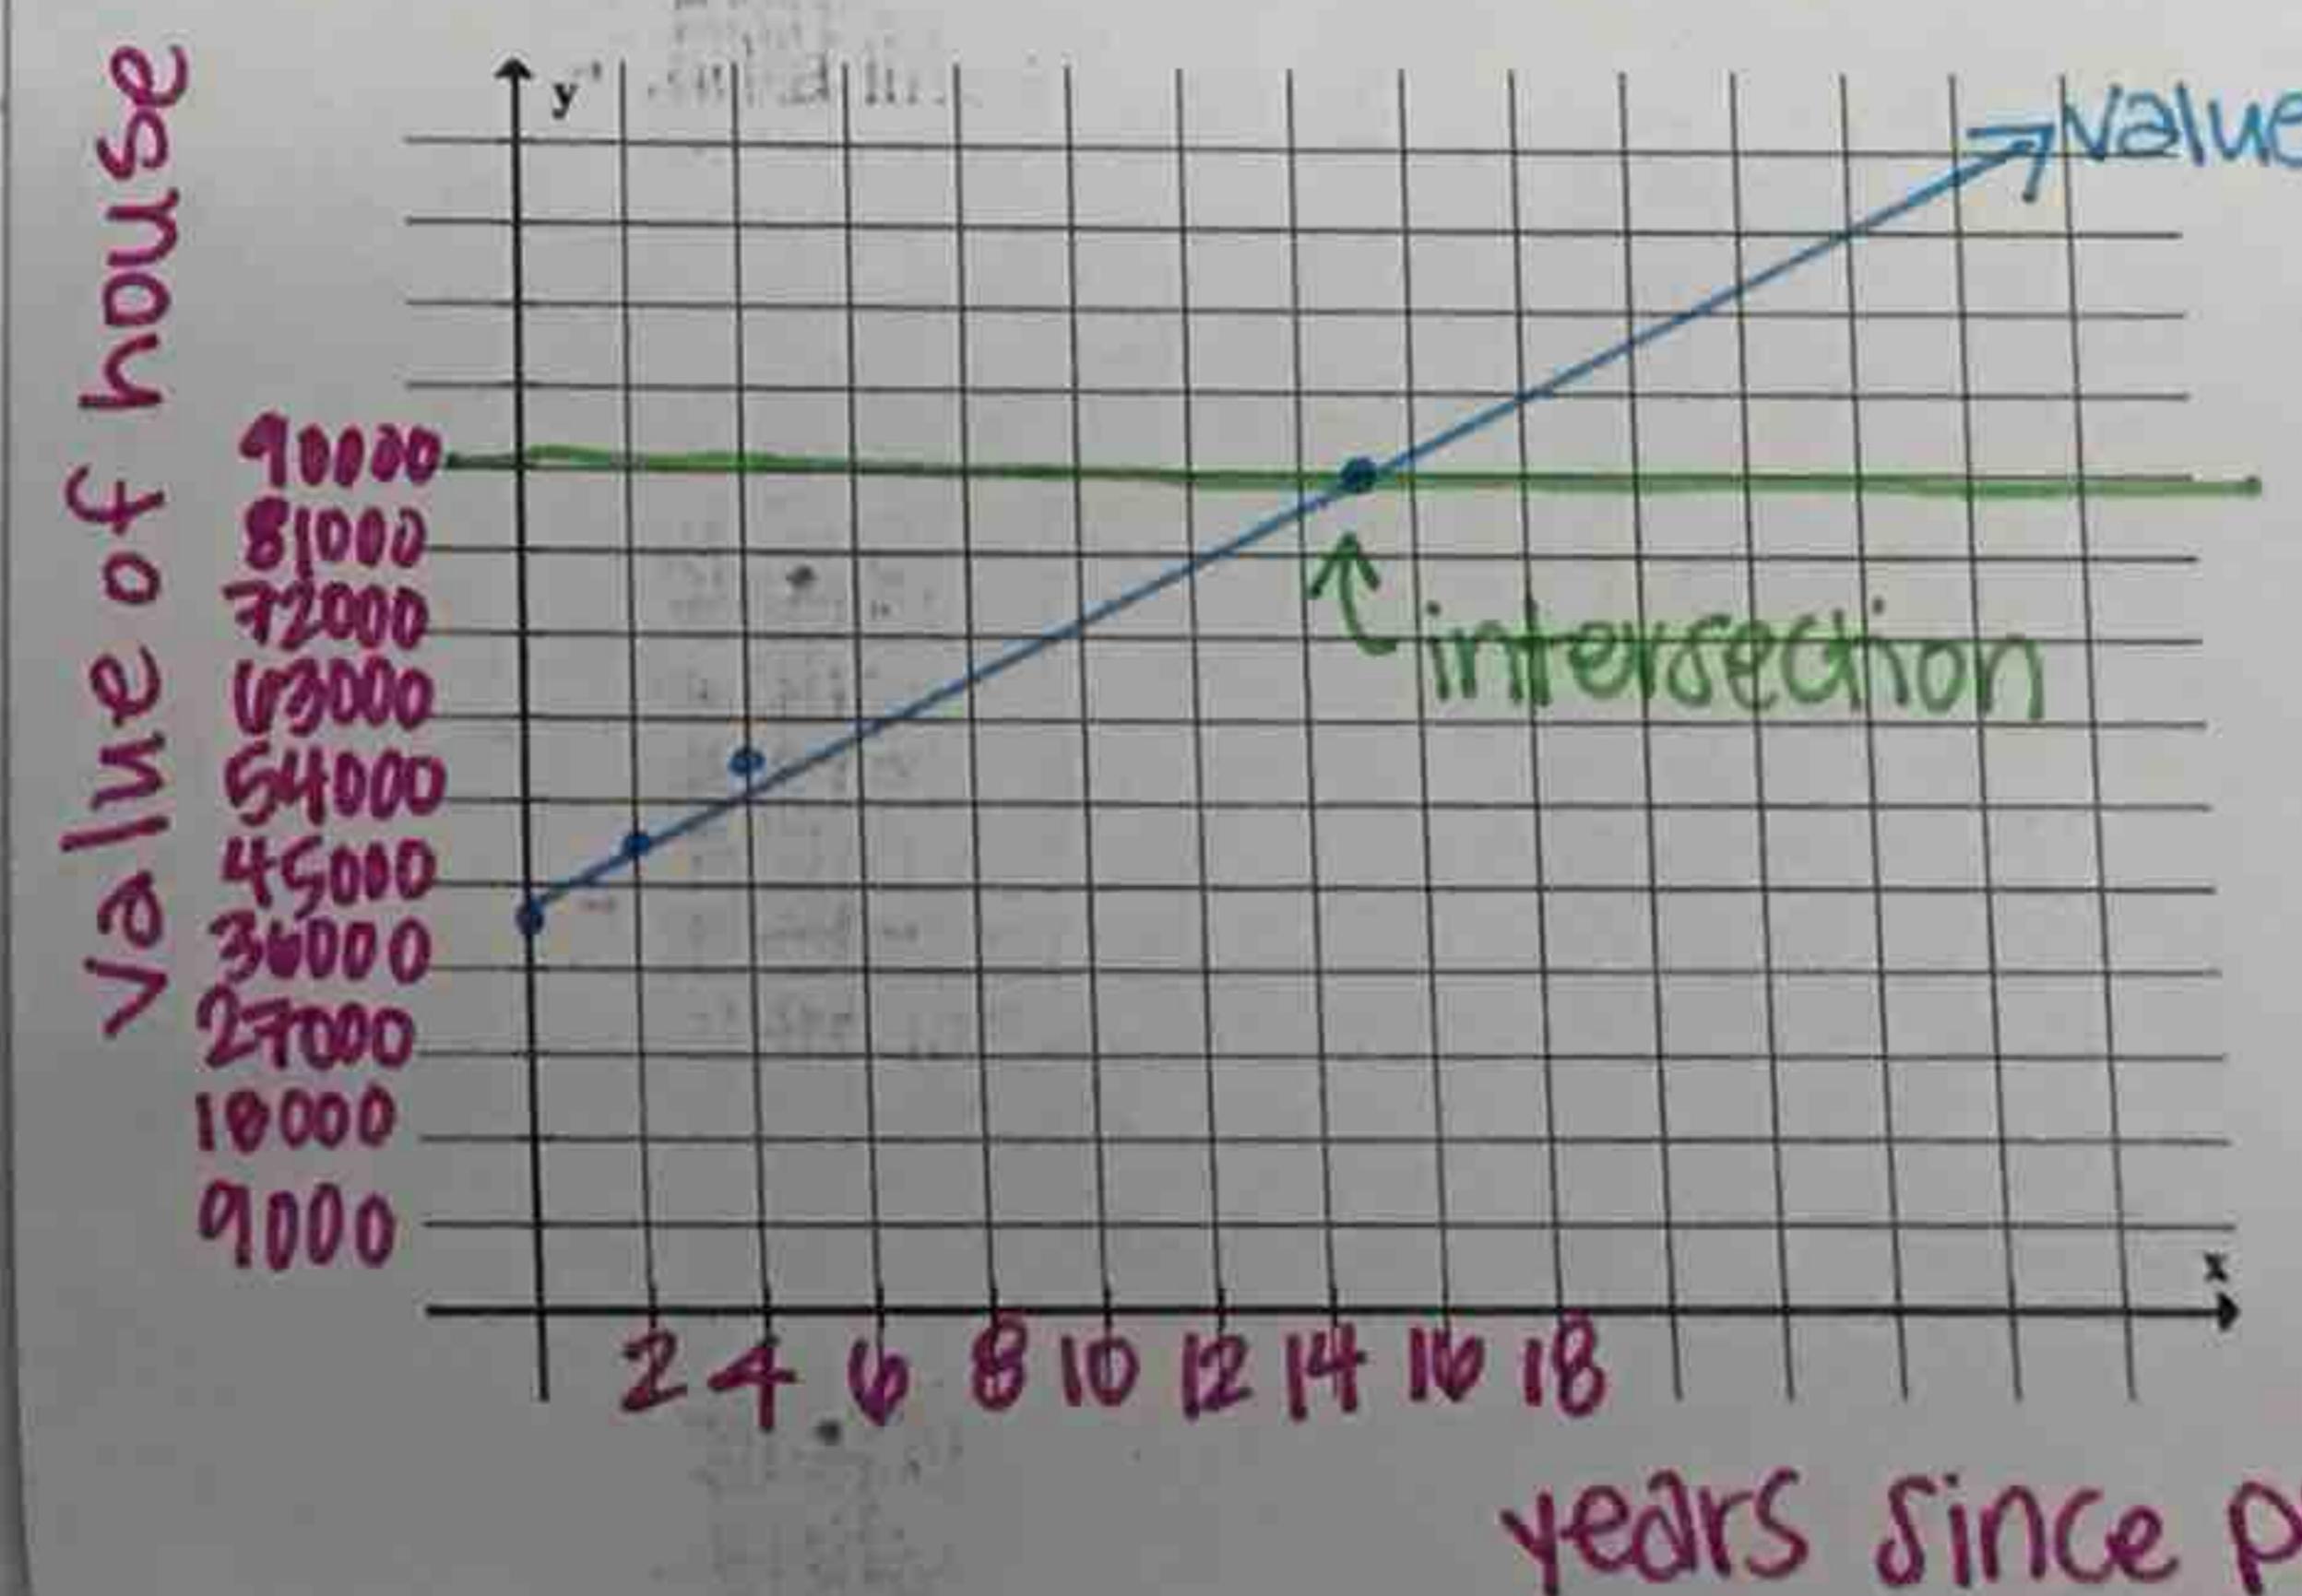

12. Determine algebraically when this house will be worth \$90,000.

$$\begin{aligned} 90000 &= 3187.5t + 42000 \\ -42000 &\quad -42000 \end{aligned}$$

$$\frac{48000}{3187.5} = \frac{3187.5t}{3187.5}$$

About 15 years

13. Determine graphically when this house will be worth \$90,000.

years since purchase
