

Quiz 1.1 - 1.3 Review

1. If $DF = 10$, find the length of EF .

$$\frac{10}{\sqrt{2}}$$

$$\begin{array}{r|l} 45 & 45 & 90 \\ \hline \times & \times & \times \sqrt{2} \\ \hline & & 10 \\ \hline \times \sqrt{2} & = & \frac{10}{\sqrt{2}} \end{array}$$

2. If $ST = 4$, find the lengths of SR and RT .

$$\begin{array}{r|l} 30 & 60 & 90 \\ \hline \times & \times \sqrt{3} & 2x \\ \hline & 4 & \\ \hline \times \sqrt{3} & = & 4 \\ \hline \sqrt{3} & \sqrt{3} & \end{array}$$

3. If $BT = 2\sqrt{3}$, find the length of CT .

$$\frac{8}{\sqrt{3}}$$

$$\begin{array}{r|l} \Delta ABT & \\ \hline 30 & 60 & 90 \\ \hline \times & \times \sqrt{3} & 2x \\ \hline 2 & 2\sqrt{3} & 2 \cdot 2 \\ \hline \end{array}$$

$$\begin{array}{r|l} \Delta CAT & \\ \hline 30 & 60 & 90 \\ \hline \times & \times \sqrt{3} & 2x \\ \hline \frac{4}{\sqrt{3}} & 4 & 2 \cdot \frac{4}{\sqrt{3}} \\ \hline \times \sqrt{3} & = & 4 \\ \hline \sqrt{3} & \sqrt{3} & \end{array}$$

4. If $CT = 12$, find the length of AB .

$$3\sqrt{3}$$

$$\begin{array}{r|l} \Delta CAT & \\ \hline 30 & 60 & 90 \\ \hline \times & \times \sqrt{3} & 2x \\ \hline 6 & 6\sqrt{3} & 12 \\ \hline 2x & = & 12 \\ \hline x & = & 6 \end{array}$$

$$\begin{array}{r|l} \Delta ABT & \\ \hline 30 & 60 & 90 \\ \hline \times & \times \sqrt{3} & 2x \\ \hline 3\sqrt{3} & 6\sqrt{3} & \\ \hline 2x & = & 6\sqrt{3} \\ \hline \frac{2x}{2} & = & \frac{6\sqrt{3}}{2} \\ \hline x & = & 3\sqrt{3} \end{array}$$

5. A square has a diagonal of length $10\sqrt{3}$. What is the perimeter of the square?

$$\begin{array}{r} 45 \ 45 \ 90 \\ x \ x \ x\sqrt{2} \\ \hline 10\sqrt{3} \end{array}$$

$$\frac{x\sqrt{2}}{\sqrt{2}} = \frac{10\sqrt{3}}{\sqrt{2}}$$

$$x = 10\sqrt{\frac{3}{2}}$$

Perimeter of square
 $= 4 \cdot s$
 $4(10\sqrt{\frac{3}{2}})$
 $40\sqrt{\frac{3}{2}}$

For 6 - 7, use the triangle below.

6. What ratio is equal to $5/3$?

☒ a. $\sin B$

☐ b. $\csc B$

☒ c. $\cos A$

☐ d. $\sec A$

7. Find $\cot \angle A$.

$$\cot \theta = \frac{\text{ADJ}}{\text{OPP}} = \frac{3}{4}$$

SOHCAHTOA

8. If $\cos 73^\circ = \sin \theta$, find θ .

Just a #

$$\sin^{-1}(\cos 73) = \theta \quad \boxed{17^\circ}$$

9. From a point 120 feet from the base of a church, the angles of elevation of the top of the building and the top of a cross on the building are 38° and 43° respectively. Find the height to the top of the cross.

$$\tan 38 = \frac{x}{120}$$

$$93.754$$

$$\tan 43 = \frac{x}{120}$$

$$111.902$$

$$111.902 - 93.754 = 18.148 \text{ ft}$$

10. A campsite is 12.88 miles from a point directly below Mt. Adams. If the angle of elevation is 15.5° from the camp to the top of the mountain, how high is the mountain?

$$\tan 15.5 = \frac{x}{12.88}$$

$$\boxed{3.572 \text{ mi}}$$

11. At a point 60.7 feet from the base of a building, the angle of elevation from that point to the top is 64.75° . How tall is the building?

$$\tan 64.75 = \frac{x}{60.7}$$

$$\boxed{128.702 \text{ ft}}$$

challenge

12. Tom wished to find the width of a river. He observed a tree directly across the river on the opposite bank. The angle of elevation to the top of the tree was 32° . Then Tom moved directly back from the bank 50 meters and found that the angle of elevation to the top of the tree was 21° . What is the width of the river?

$$\tan 21 = \frac{t}{x+50}$$

$$.383 = \frac{.625x}{x+50}$$

$$\tan 32 = \frac{t}{x}$$

$$x \cdot .625 = \frac{t}{x} \cdot x$$

$$0.625x = t$$

Rewatch your videos, look through I.1, I.2, and I.3 worksheets and notes! Good

Luck!!

$$.383(x+50) = .625x$$

$$.383x + 19.15 = .625x$$

$$- .383x \quad - .383x$$

$$19.15 = .242x$$

$$\cdot .242 \quad \cdot .242$$

$$\boxed{79.132 \text{ m}}$$
